Asynchronous Activity 1: Uploading a KNIME Project to GitHub

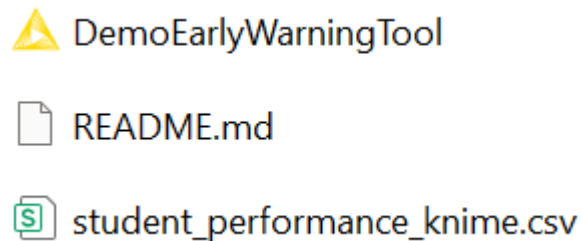

Part 1 : Prepare the Project Folder

Screenshot:

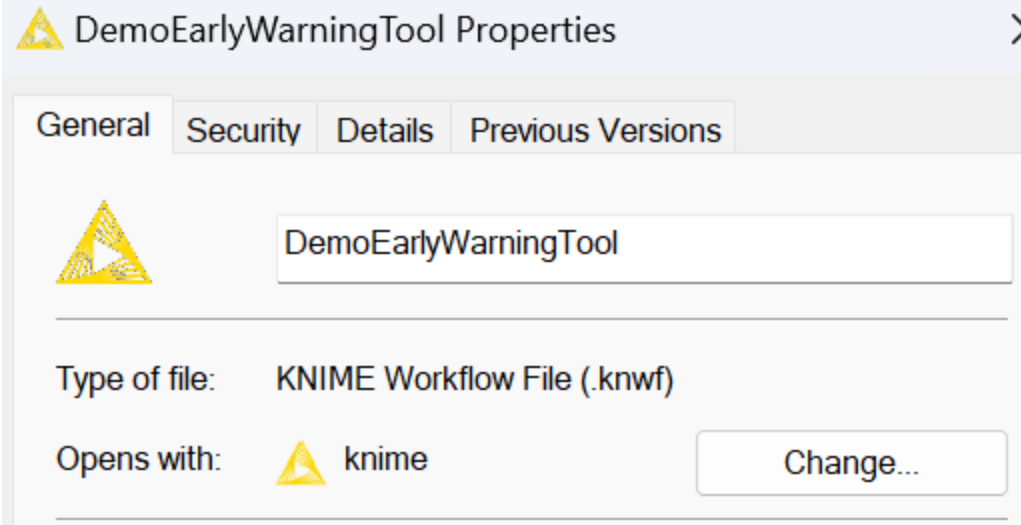

Description:

Created a folder for the asynchronous activity under the name: DemoEarlyWarningTool.

Description:

Exported the KNIME workflow to the folder and created a README file using the notepad. The CSV file was also moved from just the downloads tab to the DemoEarlyWarningTool folder.

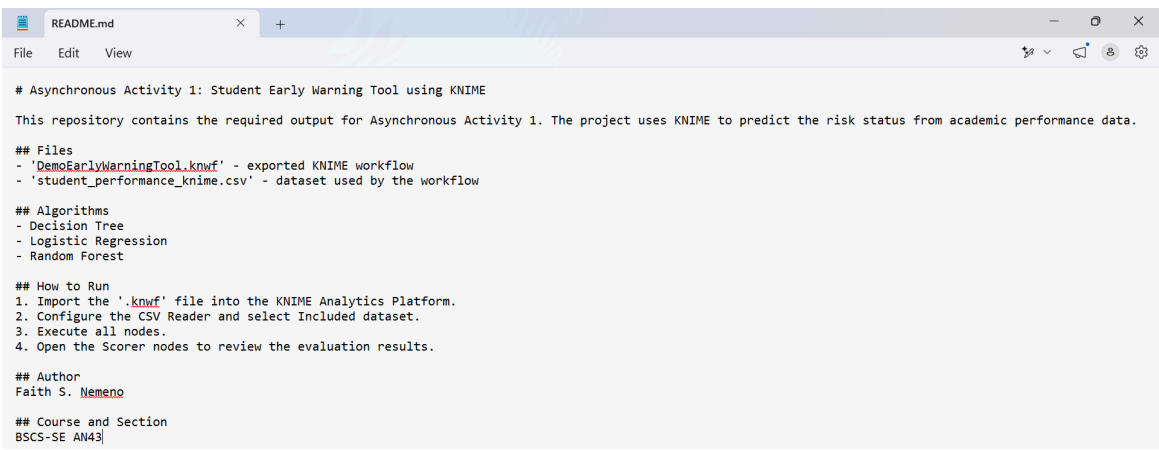

Description:

Checked the properties to confirm that the exported workflow is in .knwf format.

Step 2: Create README.md Using Notepad

Screenshot:

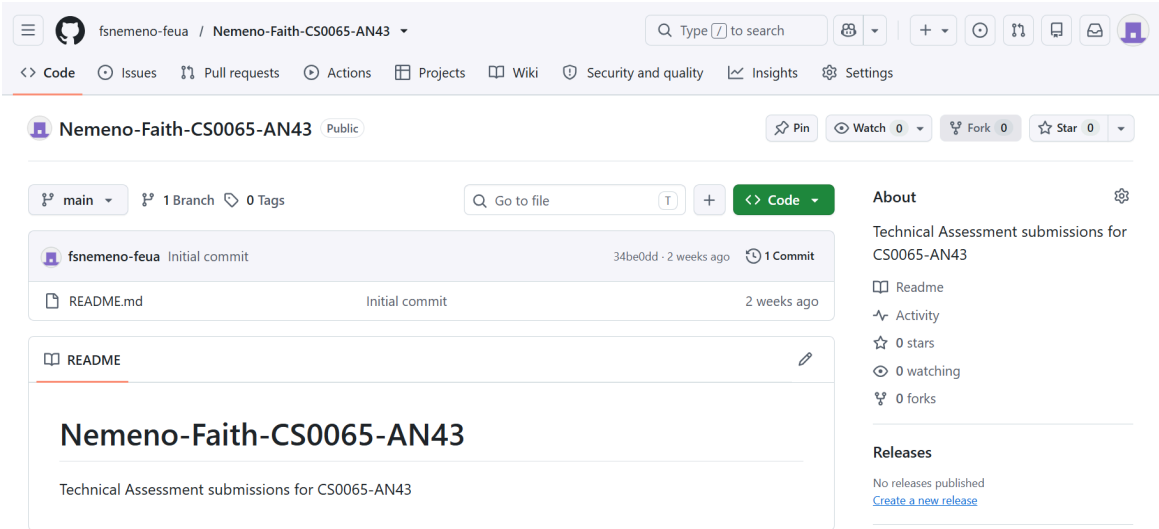

Description:

Opened the Notepad and created a README file by clicking “Save As.”

Step 3: Create the Github Repository

Screenshot:

The screenshot shows a GitHub repository page for 'Nemeno-Faith-CS0065-AN43' by user 'fsnemen-feua'. The repository is public and has 1 branch (main) and 0 tags. It shows an initial commit by 'fsnemen-feua' 2 weeks ago, containing a 'README.md' file. The repository description is 'Technical Assessment submissions for CS0065-AN43'. The right sidebar shows repository statistics: 0 stars, 0 watching, and 0 forks. The 'About' section mentions 'Technical Assessment submissions for CS0065-AN43' and lists 'Readme', 'Activity', '0 stars', '0 watching', and '0 forks'. The 'Releases' section states 'No releases published' and provides a link to 'Create a new release'.

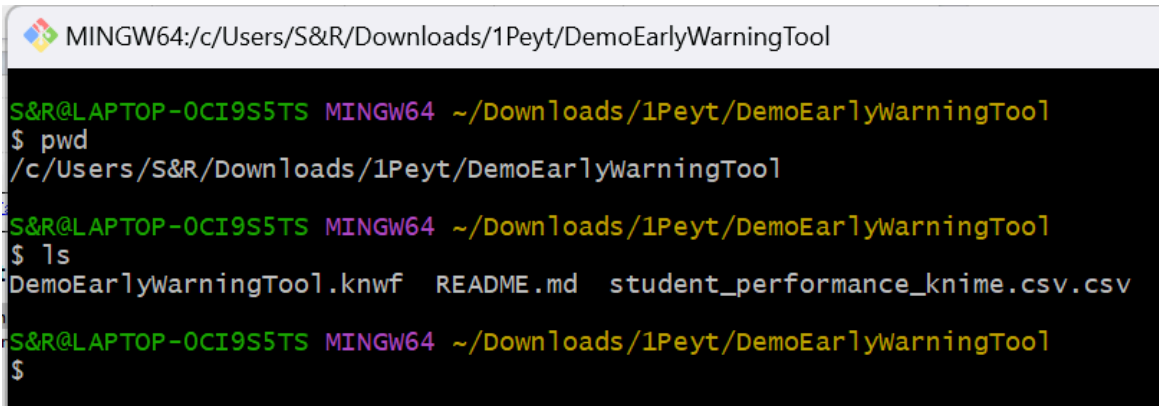

Description:

Opened the Github Repository we created during the Laboratory meeting.

GitHub URL: <https://github.com/fsnemen-feua/Nemeno-Faith-CS0065-AN43>

Step 4: Open the Correct Folder in Git Bash

Screenshot:

The screenshot shows a Git Bash terminal window with the title 'MINGW64:/c/Users/S&R/Downloads/1Peyt/DemoEarlyWarningTool'. The terminal output shows the user 'S&R@LAPTOP-OCI9S5TS' in the 'MINGW64' environment, located at '~/Downloads/1Peyt/DemoEarlyWarningTool'. The user runs the 'pwd' command, which returns '/c/Users/S&R/Downloads/1Peyt/DemoEarlyWarningTool'. Then, the user runs the 'ls' command, which lists the files: 'DemoEarlyWarningTool.knwf', 'README.md', and 'student_performance_knime.csv.csv'. The terminal prompt returns to '\$'.

Description:

Opened Git Bash by right-clicking the empty space, then located the folder by its address. After confirming the location, the files inside are then displayed by the "ls" command.

Step 5: Configure Git Identity

Screenshot:

```
S&R@LAPTOP-0CI9S5TS MINGW64 ~/Downloads/1Peyt/DemoEarlyWarningTool
$ git config --global user.name "fsnemenofeua"

S&R@LAPTOP-0CI9S5TS MINGW64 ~/Downloads/1Peyt/DemoEarlyWarningTool
$ git config --global user.email "fsnemenofeualabang.edu.ph"
```

Description:

The username and email used in the GitHub account confirms the repository to be used.

Step 6: Initialize and Commit the Project

Screenshot:

```
S&R@LAPTOP-0CI9S5TS MINGW64 ~/Downloads/1Peyt/DemoEarlyWarningTool
$ git init

Asynchronous Activity 1: Student Early Warning Tool using KNIME (edit)

This repository contains the required output for Asynchronous Activity 1. The project uses KNIME to predict the risk status from academic performance data.

Files

- 'DemoEarlyWarningTool.knwf' - exported KNIME workflow
- 'student_performance_knime.csv' - dataset used by the workflow

Algorithms

- Decision Tree
- Logistic Regression
- Random Forest

How to Run

1. Import the '.knwf' file into the KNIME Analytics Platform.
2. Configure the CSV Reader and select Included dataset.
3. Execute all nodes.
4. Open the Scorer nodes to review the evaluation results.
